

Weekly Assignment 3

Lesson 5 & 6

Due Date: Before Next Class(Saturday)

This assignment marks the final milestone of our pure HTML5 module. This week, you will validate your theoretical knowledge with an industry certification and showcase your practical engineering progress publicly on GitHub and LinkedIn.

Task 1: Google web.dev HTML Badge

Validate your core foundation with Google's official developer curriculum:

- **Course Link:** <https://web.dev/learn/html>
- **Objective:** Work through the modules and claim your official badge upon finishing.
- **LinkedIn Showcase:** Publish a post on LinkedIn sharing the badge and 2 to 3 key insights you learned regarding modern semantic HTML standards.

Task 2: Phase 1 Capstone Project Multi-Page Portfolio Website

Build a functional, standalone 3-page personal or tribute portfolio website from scratch:

- **Required File Structure:**
 - ◆ `index.html` Professional overview, biography, featured projects, and core skill sets.
 - ◆ `achievements.html` Career milestones, educational background, and a structured data table using `<caption>`, `<thead>`, `<tbody>`, `<tfoot>`, `colspan`, and `rowspan`.
 - ◆ `contact.html` Accessible inquiry/outreach form featuring `<fieldset>`, `<legend>`, associated `<label>` tags, diverse input types, and submit controls.
- **Semantic Tag Coverage:** Demonstrate mastery of the elements introduced over the past three weeks (`<header>`, `<nav>`, `<main>`, `<article>`, `<section>`, `<aside>`, `<footer>`, `<table>`, `<form>`, etc.).
- **Strict Styling Constraints:**

- ◆ ❌ **No External CSS:** Do not link an external stylesheet (.css files).
- ◆ ❌ **No Internal CSS:** Do not use `<style>` blocks in the `<head>`.
- ◆ ✅ **Inline CSS Only:** You may only use minimal inline styles (`style="..."`) for essential alignment (e.g., centering text, removing list bullet points, or setting image borders).

→ **Git Version Control & GitHub:**

- ◆ Initialize your project locally (`git init`), configure the branch name (`git branch -M main`), and connect your remote GitHub repository.
- ◆ Practice granular version control by making multiple clean, descriptive commits as you build out each page.
- ◆ Push your code to your remote repository on GitHub.

→ **LinkedIn Showcase:**

- ◆ Post screenshots of your multi-page website on LinkedIn.
- ◆ Announce the completion of your HTML5 Capstone Project.(In post caption)
- ◆ Share 2 to 3 core takeaways regarding modern semantic HTML standards, accessibility, or page structure.(In post caption)
- ◆ Include the **public GitHub repository link** directly in your post caption to showcase your code and commit history.(In post caption)

Submission Instructions: Once published, drop the links to both of your LinkedIn posts and your GitHub repository into the chat before the deadline. Let's showcase your developer journey to the tech community! :)

***Note:** This is not a simple assignment like others. This is the grand assignment of Phase One, so do it carefully and on time!*

Have fun coding! (✿◡◡)
