

Weekly Assignment

Lesson 1 & 2

Due Date: Before Next Class(Saturday)

OVERVIEW & PURPOSE

The objective of this assignment is to apply core semantic HTML5 concepts learned during the first two sessions. Students will demonstrate practical knowledge of document structuring, text formatting, multi-tier list implementations, media embedding, and resource linking.

Task 1: Quick Quiz (~20 mins)

- Go to sololearn.com
- Complete the first 2 modules of "Introduction to HTML".
- Send a quick screenshot once done!

Task 2: Build a Simple Recipe Page (recipe.html)

Pick your favorite dish or drink and build a webpage using what we learned today:

- **Headings:** Dish name in `<h1>` and section titles in `<h2>`.
- **Lists:**
 - ◆ Ingredients using bullets (`<ul>`).
 - ◆ Cooking steps using numbers (`<ol>`).
 - ◆ Add one sub-list anywhere (nested list).
- **Formatting:** Bold (`<strong>`) important ingredients and highlight (`<mark>`) cooking time.
- **Media:** Add an image of the dish (`<img>`) and a link to the original recipe (`<a>`).

 **Note:** The tags listed above are **mandatory** to use. However, try your best to incorporate all the other tags we covered in class as well (such as `<em>`, `<del>`, `<dl>`, code comments `<!-- -->`, and HTML entities like `©`).

Drop your `.html` file and the screenshot in the chat before next class.

Have fun coding! (✿◡◡)
