

From Zero to Web Developer

Understanding how the web works and building your very first HTML page from absolute scratch.

Hands-On Mentorship

Live Coding Track

Learn With Samra

Intro To Web Development

FRONT-END FOUNDATION

1. The Client

Your web browser sending a URL request.

2. The Internet

DNS routing requests across global networks.

3. The Server

Cloud computer delivering requested HTML files.

The Web Development Trinity

HTML: Structure

The skeleton and physical content.

Analogy: Bricks and walls of a house

CSS: Presentation

Colors, typography, and responsive layouts.

Analogy: Paint, interior styling, and lights

JS: Behavior

Interactivity, click logic, and dynamic data.

Analogy: Power grid, switches, and elevators

Your Developer Toolkit

Visual Studio Code

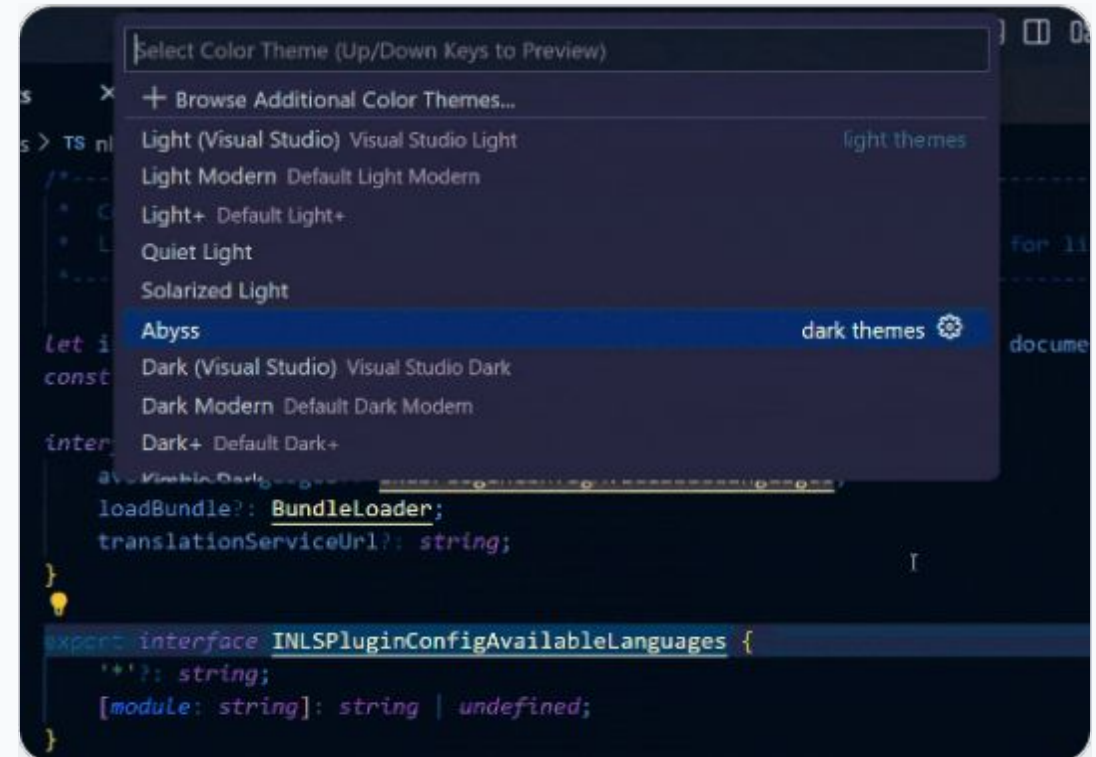

The industry standard code editor.

Google Chrome DevTools

Inspect live elements and debug errors.

Live Server Extension

Automatic page reload on every save.

$\underbrace{\langle p \rangle}_{\text{Opening Tag}} \underbrace{\text{Hello World}}_{\text{Content}} \underbrace{\langle /p \rangle}_{\text{Closing Tag}} \longrightarrow \mathbf{Element}$

Anatomy of an HTML Document

```
lang="en"> charset="UTF-8"> </div>My First Page Hello  
World! Learning HTML today.
```

Declares modern HTML5 standard to the browser.

Contains document metadata and browser tab title.

Contains all visual content displayed to the user.
