

Weekly Assignment 2

Lesson 3 & 4

Due Date: Before Next Class(Saturday)

OVERVIEW & PURPOSE

The objective of this assignment is to apply core semantic HTML5 concepts learned during Lessons 3 and 4. Student will demonstrate practical knowledge of document structuring using HTML Tables and Data Presentation using Forms.

Task 1: Student Marksheet / Weekly Timetable Table

Build a webpage using HTML tables displaying either a Student Marksheet or a Weekly Timetable:

- **Table Structure & Groupings:** Use `<table>`, `<tr>`, `<th>`, and `<td>` elements along with semantic groupings `<thead>`, `<tbody>`, and `<tfoot>`.
- **Merging & Styling:** Utilize `colspan` and `rowspan` attributes to merge cells, and apply simple border and cell spacing styling.

Task 2: User Registration Form

Build an interactive User Registration Form webpage:

- **Form Setup & Attributes:** Use the `<form>` tag with proper `action` and `method` attributes.
- **Input Types & Labels:** Include `<input>` types (text, password, email, number, date, checkbox, radio) paired with `<label>` tags using the `for` attribute association.
- **Placeholders vs Values:** Demonstrate proper usage of `placeholder` versus `value` attributes on form inputs.

Good News! (๑_๑)

No Sololearn Modules This Week: Great job on your progress so far! There are **no modules to complete on Sololearn.com** this week. Enjoy the extra practice time to focus purely on your HTML tables and forms!

Have fun coding! (✿_~_~)
